1. Who are we?

Envirowise are a company that puts the clients' needs first.

We are a dedicated team of individuals that offer a professional and reliable service to all our client. With a wealth of knowledge and experience gained over many years in the 'drainage & environmental' industry we offer services in the following areas:

- Routine & Emergency servicing and maintenance of all types of packaged sewage treatment plants, pump stations and other drainage related equipment
- Tank emptying and cleaning
- Routine & Emergency servicing and maintenance of clean water booster sets
- Specification, Supply & Installation of package treatment plants, pump stations, septic tanks, cesspools, underground vessels, rain water harvesting & petrol interceptors
- Refurbishment & Upgrading of existing systems that may be failing to meet quality limits imposed
- Problematic sites - Consultancy, drainage surveys & official/governing body liaison
- Petrol & Oil Interceptors/separators
- Routine & Emergency servicing and maintenance of Rainwater Harvesting systems
- CCTV drainage surveys
- Confined space entry works

2. Servicing & Maintenance

With dedicated teams of experienced British Water Accredited service engineers, located throughout the UK, we offer an exceptional service to our existing and new clients. Whether it be for a large commercial client or private individual, we focus on value for money, customer satisfaction and a professional, reliable service. Our core business activities encompass the following services:

- Mechanical & Electrical servicing and planned preventative maintenance of all makes and manufacturers of:
 - Package Sewage Treatment Plants
 - Pumping Stations
 - Petrol / Oil Interceptors
 - Grease Traps
 - Septic Tanks & Cesspools
 - Clean & Storm water pump stations & booster sets
- Commissioning of new plants and systems
- Emptying of systems using vacuum and combination vacuum tankers
- System repairs, upgrades & refurbishments
- Supply of spare parts
- Remote site monitoring
- We offer ad hoc servicing or inspection visits to our clients or alternatively chose one of the following:
 - Site specific, tailored service contracts
 - 1, 3 or 5 year service agreements at discounted rates
 - Full Management Contracts
 - All Inclusive Contracts
 - Nationwide Coverage

3. Specification, Supply & Installation

We are a skilled, knowledgeable and reliable team of professionals with many years experience in the design, specification, supply and installation of off mains drainage solutions. We have been instrumental in the full supply and installation of plant and equipment all over the UK.

With our in-house expertise we can offer full turnkey solutions on all applications whether it be for a single household or a larger commercial development. We are independent and therefore not affiliated to any particular manufacturer or supplier so we can be impartial and offer the right solution for the site or application, unlike many of our competitors.

We undertake the design and installation of all systems and equipment associated with the following core activities:

- Package Sewage Treatment Plants
- Pumping Stations and Rising Mains
- Design & installation of soakaway systems
- Septic Tanks
- Cesspools
- Petrol / Oil Interceptors
- Grease Traps
- Rain Water harvesting & grey water systems
- Liaison with government bodies & agencies and applications on your behalf

4. Problematic Sites!

Numerous sites throughout the UK have existing treatment systems or pumping stations installed that are causing problems for the owners or licensees and may not be meeting their required design or consent permissions. As an experienced and well known company within the industry we are called to many sites to offer our professional opinion along with suitable recommendations to resolve operational or process performance issues.

With our team of experienced and professional staff we have specialized in the following areas:

- Treatment Plant & Pump Station refurbishment, upgrades and modifications
- Environment Agency liaison and applications
- Mapping and drawing of sites and equipment
- CCTV drainage surveys
- On site monitoring and sampling
- Process and performance analysis
- Site efficiency surveys/cost saving recommendations

On many of the sites that we attend our clients have had another party visit prior to our attendance and 9 times out of 10 they advise that 'due to the condition and age of the equipment we recommend that this is ripped out and new plant installed'. In our experience modifications can be made to the existing equipment that results in the equipment performing as required without the capital expenditure and civil costs of installing new equipment. As we are not affiliated to any particular manufacturer we are totally impartial and offer the right solution for the client.

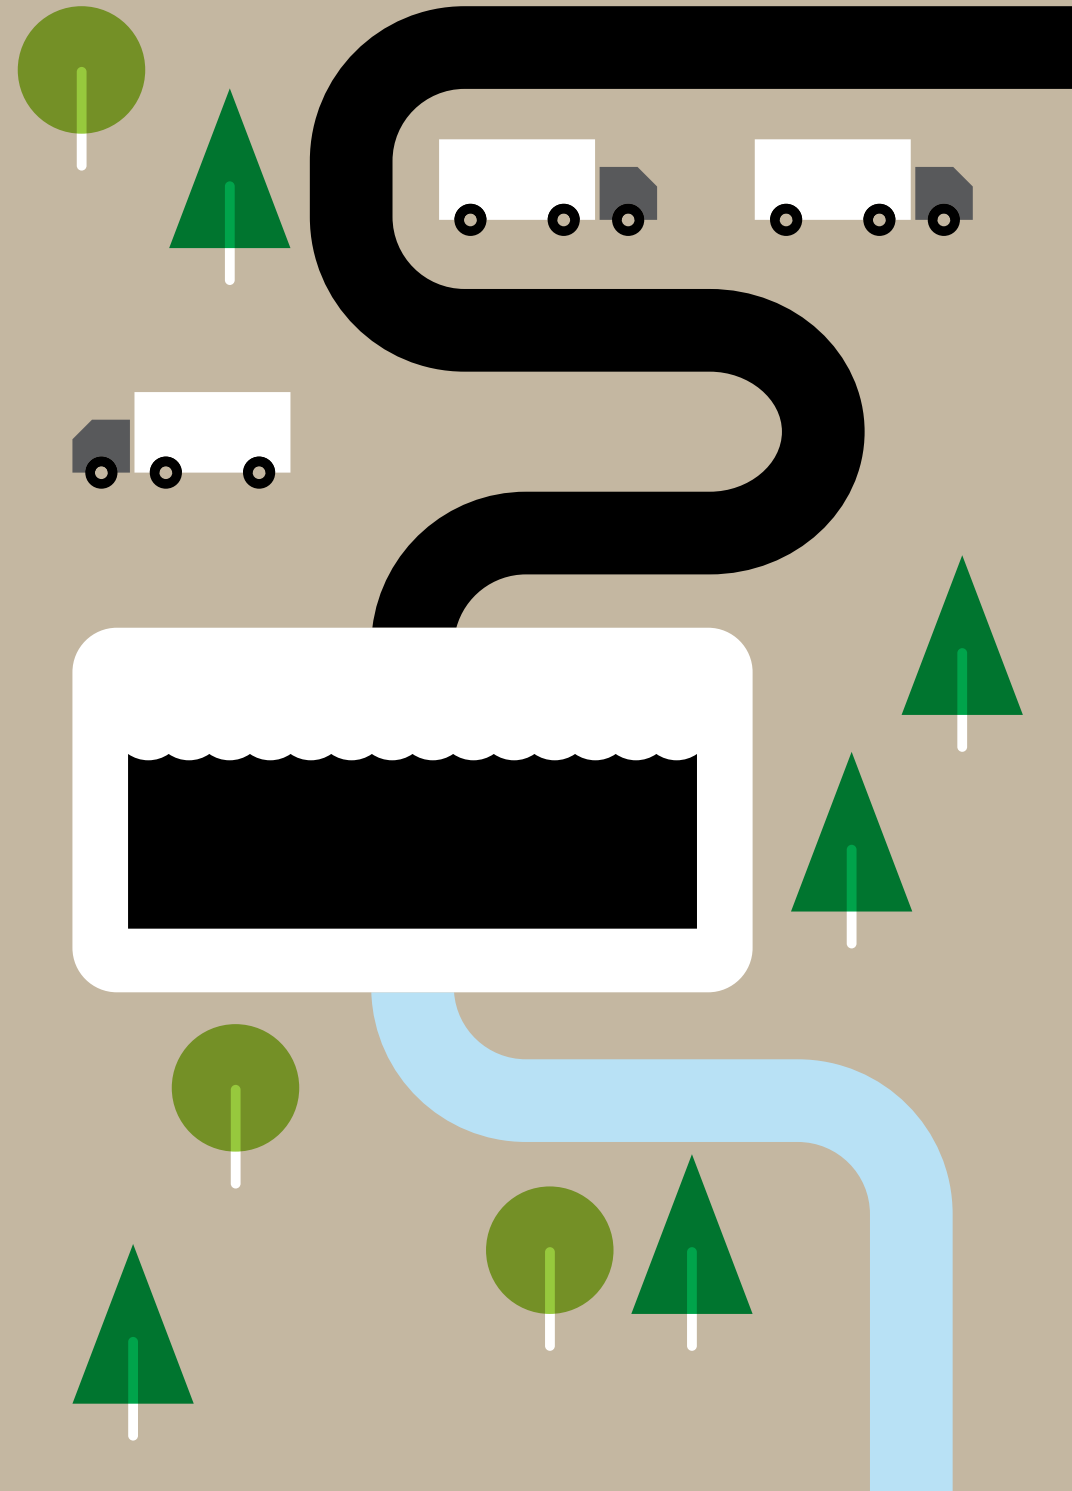

5. Petrol & Oil Interceptors/Separators

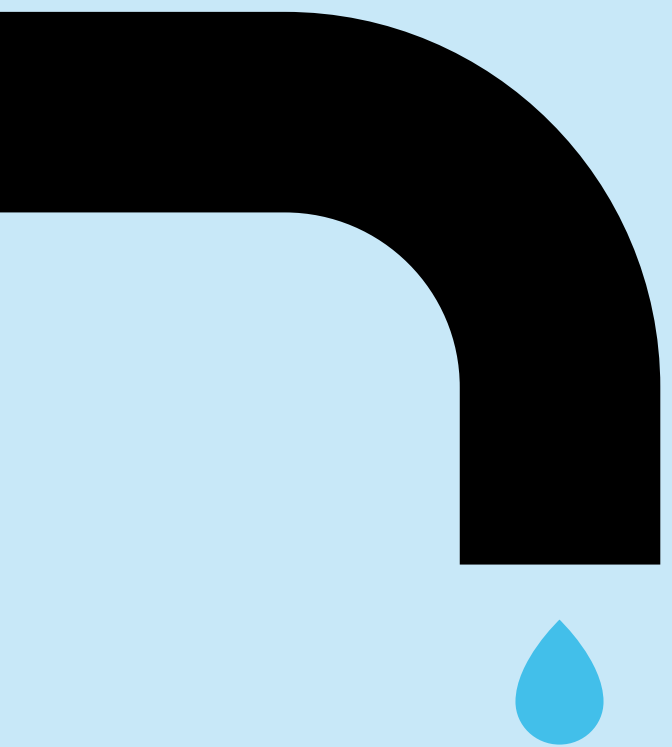

Legal requirements and government legislation are changing all the time, it is now more crucial than ever that companies uphold their legal obligations and maintain and service fuel and oil storage tanks in line with strict guidelines, to prevent pollution events occurring.

Envirowise's in-house specialist team, with many years of experience in this field, are able to assist and advise in most circumstances that arise. At Envirowise we ensure that all of your pollution prevention measures are in place and working to help prevent a pollution event from occurring and keep regulators satisfied.

We offer the following services in this field:

- Tank inspections and audits
- Alarm installation
- Interceptor/Separator servicing & maintenance
- Specification, supply and installation of interceptors
- Consultation & Liaison
- 1 to 5 year service contracts
- Tank emptying and disposal
- Spare Parts

6. Clean Water Systems

Envirowise service and maintain a large number of 'clean water' sites and systems. Our works on these sites encompass the following:

- Routine servicing and maintenance of clean water booster sets
- Refurbishment, upgrades and replacement of clean water systems
- Supply of spare parts
- Consultation and advice on the specification, supply and installation of required systems

As an independent service provider, Envirowise work with all the major booster pump manufacturers for services, refurbishment and replacement of systems.

7. Money Saving Opportunities

In the current economic climate when money is tight and budgets are even tighter we are always looking for opportunities for our existing and new clients to save money, this can be achieved by various ways and means, depending on each individual site specifics.

We have proven that by making some very small changes to servicing regimes, plant operation control or carrying out some minor system modifications, substantial monthly & yearly costs can be reduced significantly.

The key to our success in this area is simple - knowing our products, our business and our clients' needs & requirements. This, coupled with the skilled, experienced and knowledgeable staff employed by Envirowise, puts us ahead of our competitors.

By instigating changes to individual site specifics, whether it be a single domestic household, large commercial site or multiple client sites, in the majority of cases, we can provide substantial cost saving opportunities. By tailoring individual needs and requirements and working more efficiently, not only are we working in our client's best interest and saving them hard earned money but we are also playing another part in looking after and caring for our environment. Some of the more tangible ways this is evident are:

- Reducing electrical running costs of plant, sometimes saving up to 60% on fuel bills
- Lowering emissions into the environment and atmosphere by reducing tankering requirements
- Reduced tankering equals less CO2 emissions and less fuel consumption
- Introducing energy saving devices to equipment to save on energy
- Tailoring of Planned Preventative Maintenance regimes to meet environmental obligations NOT supplier's budgets!
